

Performance Testing

Project Name	ComicCraft - AI Comic Story Creator using Gemini Models
Team ID	SWTID-2026-7239
Team Lead	Divyadharshini R
Team Members	Hithisri V, Harini A, Manju R, Preethi V

Testing Scope

The project documentation describes local verification of the complete workflow: AI text generation, image creation, layout building, PDF export, and frontend rendering.

Local Server Test

Run `uvicorn app.main:app --reload` and access `http://127.0.0.1:8000`.

API Verification

FastAPI documentation is available at `http://127.0.0.1:8000/docs` for testing endpoints such as `/generate-comic/json`, `/generate`, `/export-success`, and `/test-image`.

Functional Test Scenario 1

Enter a brave fox exploring an enchanted forest, with selected character, setting, dramatic tone, and anime art style; verify outline, story, images, preview, and export.

Functional Test Scenario 2

Change tone to funny and art style to comic book; submit again and verify that the pipeline regenerates the outline, story, and images with the new preferences.

Export Test

Use the download button, verify layout binding, PDF creation with FPDF, timestamped output, and export success page.

Error Handling

`routes.py` uses FastAPI `HTTPException` and `try-except` blocks to handle API errors and JSON decoding/unexpected failures.
